4th December, 1951.

Dear *Dr. Penfield*

Since you talked to me the other day about your research on Temporal Lobe I have given the matter considerable thought. This project holds for me both a temptation and a challenge - a temptation because it would mean coming back to work with you, remembering the old times of our association, and a challenge because the subject is so interesting to me.

Unfortunately I do not believe that I can spare any time from the numerous obligations that I have already contracted with my patients and my teaching at the Allan.

However, I think I have found a man who could do this work. I am thinking of Dr. Cecil Mushatt, whom you probably remember as having interned at the Neurological in 1943. He is a very close friend of Dr. Cone, who could give you full information. After he left the Neurological he spent one year at the Allan, and was closely associated with me.

Following my suggestion, he went to Boston where he spent two years with Dr. Cobb and Dr. Lindeman at the Massachusetts General. His neurological and psychiatric background are excellent, and his knowledge of internal medicine is first-rate. He has been doing psychomatic research in Boston, and I believe that your research project would appeal to him immensely.

I also feel that because of my friendship with him, I might spare sometime discussing the project with him,

MIGUEL PRADOS, M.D.

as he proceeds, which I would like to do very much.

Hoping that this information will be of some help
to you,

I remain,

With kindest regards,

Yours very sincerely,
