

30th July 1931.

Dr. C.F. Martin,
McGill University,
Montreal.

Dear Dr. Martin,

Drs. Gage and Chorobski have been working in the animal house and here in the experimental laboratory at the Victoria.

The subject of Dr. Gage's experiments is:- "The Effect of Nerve Section on Experimental Epilepsy," and the subject of Dr. Chorobski's is:- "The Origin, Distribution and Function of Cerebral Vascular Nerves."

Dr. Conen has been doing some work on syringomyelia and I have been working experimentally on the innervation of the cerebral blood vessels.

Yours sincerely,

WGP/HL.
