

April 7th, 1941

No.8.

Letter sent to Dr. Cone, original by boat and carbon by air. Explained about board and said that I would have x-ray plates taken on the 1st of July and resubmitted. Asked something more about the information given by Major Baker. Reminded him that he had not answered whether Childe feels that Eaglesham could take his place. Told him that if I go over I should be concerned with the system of handling injuries of the nervous system in all Canadian hospitals, if possible, and that the Manual had not been sent according to promise.
