Elliott.

#1 Neurological Hospital

Dear Dr Penfield,

I thought you might like to see this anyway.  
I was reminded of you particularly because Sterrington and  
Aarain came in together.

I was only able to attend the morning session  
because of duty but Bottrell presented the results of  
all the discs done here since Dr Core ~~started~~ <sup>started</sup> the hospital.

Brigadier Riddoch gave his usual talk and  
the conclusion was that SSN spines should always have  
manometry early but not operated until spinal shock  
has passed off. They are still undecided what form  
of bladder care should be given in the field in the first 48 hrs.  
One does not as yet have a definite understanding about  
catheterization in the field and one wonders whether the  
M.Os should not be encouraged on several definite steps  
to be taken in the care of boys with spinal cord damage.

Life is good although one occasionally  
gets a trifle lonely - but I try to play regular golf  
& tennis to "master any blues".

Sincerely

Harold

P.S. It is being increasingly recognized (especially by the Americans)  
that Dr Core and Dr Russell established the ideal type of and  
necessary equipment for a special hospital.
