Dear George, es evsd I" esti befeiqietni esf
-et sifgoygozni est . ".beised nisid bebehow
-qs farit est Many thanks for your telegram
-at the time of the opening of the Institute.
It arrived just in time and I read it at the
-ot the banquet that evening, a menu of which
I am enclosing in the hope of making you a
little jealous.

Please give my best regards to
Victoria. Always looking forward to your
success - don't expect to have anything
in hand at once,

Yours sincerely,

WGP/HL.

ACQ. recd. Nov. 1838. -2-

P.S. The picture on the front of the menu is a photograph of the painting on the ceiling of the entrance hall. The drawing of the neuroglia cells is from an original by Golgi. You will notice in the border the ventricle, and the Greek legend "Egkephalon de Trothenta Eidomen Iothenta" comes from Galen, and Francis has interpreted it as "I have seen a severely wounded brain healed." The hieroglyphics represent the word "brain", being the first appearance of that word in literature; it was taken from the Smith papyrus. The Ram, of course, symbolizes the head or brain in astrology.
