

INJURED DOCTOR'S STOICISM.

(From Our Own Correspondent.)

PARIS, Sunday.—Among the passengers who reached Paris yesterday was Miss Edna Hale, a young American.

"One of my fellow-passengers," she said, "was a young American, Dr. Penfield, on his way to join the American ambulance at Neuilly. He was badly injured by the explosion, one of his legs being broken.

"He made no complaint, but as he lay on the deck he gave directions to those around engaged in first-aid work.

"One young Frenchman would certainly have bled to death but for the doctor's help. He showed me how to hold the severed artery in the poor fellow's head with my thumb, and so stop the bleeding.

"I held the artery two hours, at the end of which time coagulation set in. The Frenchman's name was Edouard L. Maubourgeuet. He was awfully plucky.

"Dr. Penfield also saved the life of a French girl whose leg was terribly hurt.

"I believe between fifty and a hundred persons were killed or drowned.

"When the explosion occurred I was talking to Miss Baldwin, daughter of Professor Baldwin. We were watching an Indian inflating a pneumatic safety jacket. He had just deflated it when the torpedo struck the Sussex, and he was thrown into the water and drowned.
